SKILLS

- Design software (Figma)
- VibeCoder
- User Interface (UI) Design
- User Experience (UX) Design
- Responsive Design
- Prototyping And Wireframe
- Usability Testing
- Design Thinking
- Research (interviews, surveys, user journeys)

CERTIFICATION

- <https://drive.google.com/file/d/11UtpgHwKe4-3RcdvfFMacUKcHHpP8aEt/view?usp=drivesdk>

DESIGN PROJECTS

Signal AI Dashboard Redesign

03/2026 – 03/2026

Signal AI is an AI powered marketing analytics dashboard that helps businesses track campaign performance, understand customer behavior, and make smarter marketing decisions through real time insights and data visualization.

Project Objective

Designed a modern and intuitive AI dashboard experience focused on improving user activation, reducing churn, and helping marketing teams quickly understand campaign performance through actionable insights.

Key Contributions

- Conducted user research with 10+ marketing professionals to identify usability issues and business pain points
- Simplified complex analytics and AI recommendations into clear, actionable dashboard experiences
- Redesigned dashboard navigation to improve accessibility between analytics, campaigns, reports, and AI insights
- Structured key metrics into scannable KPI cards for faster decision making
- Designed a dedicated AI Insights panel to improve visibility of recommendations and opportunities
- Created interactive charts, filters, and reporting tools for deeper campaign analysis
- Streamlined onboarding flows to guide users toward their first meaningful product experience faster
- Designed contextual upgrade prompts for premium features without disrupting the user experience
- Built responsive high fidelity interfaces and interactive prototypes across 20+ product screens

Design Process

- User Interviews
- Surveys & Research Synthesis
- Competitor Analysis
- Information Architecture
- Wireframing
- High Fidelity UI Design
- Interactive Prototyping
- Usability Testing

Outcome

- Improved onboarding experience and user activation flow
- Increased visibility and usability of AI powered recommendations
- Reduced interface complexity through clearer navigation and hierarchy
- Created a scalable dashboard system optimized for engagement and retention

Care Sync – Connected Healthcare System

04/2026 – 04/2026

Care Sync is a connected healthcare platform designed to improve communication and workflow between doctors, nurses, patients, and administrators through one unified real time system.

Project Objective

Designed an end to end healthcare platform focused on improving workflow efficiency, reducing communication gaps, and helping healthcare professionals make faster, more accurate decisions through a centralized patient management system.

Key Contributions

- Conducted workflow analysis and user research across patients, nurses, and doctors to understand real operational challenges
- Identified key system problems including fragmented patient records, delayed communication, and disconnected healthcare tools
- Created role based experiences tailored for doctors, nurses, and patients based on their workflows and decision making patterns
- Designed a centralized EHR (Electronic Health Record) system to ensure consistent and accessible patient data across the platform
- Structured a real time workflow system where updates instantly sync across patient apps, nurse dashboards, and doctor interfaces
- Built task focused nurse dashboards optimized for speed, repetitive workflows, and minimal documentation friction
- Designed doctor dashboards focused on fast decision making, patient overviews, approvals, and critical alerts only
- Simplified patient experiences with easy to understand health summaries, reminders, tracking systems, and notifications
- Developed context based communication inside patient profiles to reduce workflow interruptions caused by external messaging tools
- Created interactive prototypes and responsive interfaces across 20+ product screens

Design Process

- User Interviews
- Workflow Mapping
- Persona Creation
- System Architecture Planning
- Information Architecture
- Wireframing
- UI Design
- Interactive Prototyping
- Usability Testing

Research Insights Applied

- Simplified interfaces to reduce cognitive overload in healthcare environments
- Prioritized task based workflows instead of feature heavy navigation

- Used role based information visibility to prevent unnecessary complexity for patients and staff
- Designed real time feedback systems to improve communication and care efficiency

Outcome

- Improved communication flow between healthcare staff and patients
- Reduced workflow friction through centralized patient records and real time updates
- Increased efficiency for nurses and doctors through role focused dashboards
- Created a scalable healthcare system built around real clinical workflows instead of assumptions

Hypertek – NFA Web3 Marketplace (Remote)

Hypertek builds Web3 platforms focused on Non-Fungible Experiences (NFE), a new way for users to discover, mint, and trade digital experiences.

01/2024 – Present

- Led UX research for the NFA (non-fungible assets) marketplace, mapping user journeys for creators and collectors.
- Designed the end-to-end marketplace flow for buying, selling, and minting digital experiences.
- Built a scalable design system that improved development speed and visual consistency across the product.
- Designed creator dashboards, admin tools, fee management panels, and analytics pages.
- Conducted usability tests and translated insights into clear design improvements.
- Collaborated closely with engineering to ensure pixel-perfect implementation and smooth handoff.

Solar Energy Platform (VOTEK)

VOTEK is a digital platform that helps homeowners and businesses explore and adopt solar energy with clarity and confidence.

11/2025 – 11/2025

Designed a digital platform that makes solar energy easy to explore and adopt for homeowners and businesses. I led the end-to-end design process from research and user journey mapping to visual design and prototype testing. Unlike traditional energy sites, I focused on **educating through design**: interactive savings calculators, real installation stories, and a guided step-by-step flow that builds user confidence. Delivered a modern, responsive experience that simplifies decision making, increases trust, and promotes clean energy adoption through clarity and accessibility.

Key Responsibilities

- Led the end-to-end design process from research and user journey mapping to high-fidelity UI and prototype testing.

- Focused on educating users through design using interactive savings calculators, real installation stories, and a guided step-by-step flow to reduce friction.
- Researched key pain points around switching to solar, including confusion, lack of cost transparency, and trust concerns.
- Designed a simple, intuitive information architecture that reduces complexity and makes solar choices easier to understand.
- Delivered core product features: Instant Savings Calculator, Step-by-Step Guide, Certified Installer Network, Flexible Payment Plans, and Support Dashboard.
- Designed key pages including Homepage, How It Works, Calculator, Projects Gallery, FAQ, Contact, and Testimonials.
- Built responsive, accessible interfaces with high-fidelity prototypes optimized for both desktop and mobile.

Tools

- Figma

- ChatGPT
- Jitte

Impact

- Made solar information understandable for beginners.
- Increased user trust through verified installers and clear guidance.
- Improved lead conversions through easy calculator and contact flows.
